X-Rite ColorMunki Photo Review

December 22nd, 2008 by [3 kwc](#)

X-Rite's ColorMunki line was announced at PMA this spring. A novel design, combined screen and printer calibration, and an affordable \$500 price point is plenty to get attention with. I've used colorimeters to calibrate my computer monitor before and I personally found them to be boring, though essential devices. Sure, I want the photo on my screen to match what I print and save me time, paper, and printer ink. But if only the calibration process wasn't so tedious! So I was excited to find out that the ColorMunki Photo offers more - the color accuracy that photographers need as well as creative tools for sampling and experimenting with color in new ways. If you've ever wondered what it would be like to have a Photoshop Eyedropper Tool for the real world, read on.

Key Functions

- Calibrates your LCD monitor or LCD projector
- Calibrates your printer
- Scans in colors and creates palettes for use in Adobe and Quark software

MSRP: \$499
